It was born about 4.5 billion years ago when a cloud of interstellar gas and dust collapsed. Most of the material was pulled toward a central point: nearly all of the solar system's ...

Located inside galaxies, these cosmic arrangements are made up of at least one star and all the objects that travel around it, including planets, dwarf planets, moons, asteroids, comets, and...

The Solar System is the gravitationally bound system comprising the Sun and all natural objects that orbit it either directly or indirectly. This includes the eight planets, their ...

NASA describes the Solar System as a planetary system, including the Sun and all objects that orbit it. [17] When not used as a proper noun and written without capitalization, "solar system"; ...

Targeting our solar system's other worlds is well worth the effort. Nebulae, star clusters, and galaxies are the night sky's hidden gems. Explore the tools that can help you unlock the night...

Located inside galaxies, these cosmic arrangements are made up of at least one star and all the objects that travel around it, including planets, dwarf planets, moons, asteroids, ...

Overview
Trans-Neptunian region
Definition
Formation and evolution
General characteristics
Sun
Inner Solar System
Outer Solar System
Beyond the orbit of Neptune lies the area of the "trans-Neptunian region", with the doughnut-shaped Kuiper belt, home of Pluto and several other dwarf planets, and an overlapping disc of scattered objects, which is tilted toward the plane of the Solar System and reaches much further out than the Kuiper belt. The entire region is still largely unexplored. It appears to consist overwhelming...

Solar system, assemblage consisting of the Sun and those bodies orbiting it: 8 planets with more than 400 known planetary satellites; many asteroids, some with their own ...
