What are amorphous solar panels?

Since their inception in the 1970s, amorphous silicon cells have become more widely used: amorphous solar panels are now the second most popular thin film solar panel option! Here are some companies that offer amorphous cells and products: Panasonic, one of the leading solar panel brands, has an amorphous solar cell product called Amorton.

Are amorphous solar panels the cheapest?

Amorphous solar panels are the cheapest per watt (\$/watt). Amorphous solar cells are more widely used in low-power electronics than solar panels. Amorphous solar panels aren't for everyone: they are much less efficient than traditional solar panels. To compare quotes with different types of solar equipment, check out the EnergySage Marketplace.

Are amorphous solar panels better than traditional solar panels?
