The total load on a power station consists of two parts viz., base load and peak load. In order to achieve overall economy, the best method to meet load is to interconnect two different power ...

Base load refers to the amount of electricity - or electrical power - generated that is needed during the course of the day. The terms medium and peak load, on the other hand, refer to the power ...

The base load is the minimal amount of electricity needed during a 24-hour period. Power must be supplied to components that are always in operation (also referred to as ...

The remainder of demand, varying throughout a day, is met by intermittent sources together with dispatchable generation (such as load following power plants, peaking power plants, which ...
