Can photovoltaic energy storage reduce energy consumption cost of 5G base station?

Ye G. Research on reducing energy consumption cost of 5G Base Station based on photovoltaic energy storage system. In: 2021 IEEE International Conference on Computer Science, Electronic Information Engineering and Intelligent Control Technology (CEI), Fuzhou, China, 2021. p. 480-484.

What is a 5G photovoltaic storage system?

The photovoltaic storage system is introduced into the ultra-dense heterogeneous network of 5G base stations composed of macro and micro base stations to form the micro network structure of 5G base stations .

What is the energy storage planning capacity of large-scale 5G BS?

In Case 2, the total optimal energy storage planning capacity of large-scale 5G BSs in commercial, residential, and working areas is 9039.20 kWh, and the corresponding total rated power is 1807.84 kW. The total energy storage planning capacity of large-scale 5G BSs in Case 3 is 7742 kWh, which is 14.35% lower than that of Case 2.

Why do 5G BSS use battery energy storage systems?

The reason is that 5G BSs are configured with battery energy storage systems to store low-cost electricity. Moreover, the PV energy curtailment is significantly reduced in Case 2, and the PV absorption rate is effectively increased by planning battery energy storage systems.

New modular designs enable capacity expansion through simple container additions at just \$210/kWh for incremental capacity. These innovations have improved ROI significantly, with ...

Beijing has constructed about 114,500 5G base stations as of April, with a density of 52 stations per 10,000 people, ranking first in China, said an official on Friday.

Their 5G-enabled energy storage scalability platform allows bidirectional energy flow, turning 127 base stations into a 28MWh virtual power plant during peak demand.
