---

Flow batteries possess several attractive features including long cycle life, flexible design, ease of scaling up, and high safety. They are considered an excellent choice for large ...

Polysulfide/ferricyanide flow batteries (S/Fe RFBs), with the advantages of abundant earth reservation, low cost, high safety, and environmental friendliness, have attracted ...

GFE-1 is an ultra-high quality treated PAN-based graphite felt with specialized fibers and weave to achieve high wetting and absorption. This material was specifically developed for the ...

GFE-1 is an ultra-high quality treated PAN-based graphite felt with specialized fibers and weave to achieve high wetting and absorption. This ...

NiMoS-CF demonstrated good charge transfer and catalytic performance for polysulfide redox processes. By directly growing electrocatalytic materials on carbon felt (CF), ...

Manufactured using advanced carbon fiber processing techniques, this electrode felt offers superior electrical conductivity, optimized porosity, and excellent durability.

Here, we report a surface engineered carbon felt with abundant carbon defects, which realizes highly reversible Fe deposition/dissolution for all-iron flow batteries.

Permeable electrodes made of SIGRACELL carbon and graphite felts are the first choice for high-temperature batteries like redox flow batteries. Our felts are used for anodes as well as cathodes.
