---

The results confirmed the active distribution network-grid planning model for dynamic configuration of energy storage systems. Both Example 2 and Example 3 had 3 ESS ...

This paper proposes a novel Nash bargaining based energy storage coordinated allocation method to fully incentivize shared energy storage to participate in reliability services within the ...

The paper proposes an improved particle swarm optimization algorithm. Simulation and case analysis show that the algorithm can stably achieve optimized configuration, stable ...

This paper proposes a complementary reinforcement learning (RL) and optimization approach, namely SA2CO, to address the coordinated dispatch of the energy ...

This article proposes a hybrid collaborative energy storage configuration method for active distribution networks based on improved particle swarm optimization to address the ...

Several researchers have explored battery energy storage systems (ESSs), focusing on optimization, control, and forecasting techniques to enhance performance, economic viability, ...

In order to ensure the safe and stable operation of microgrid, an up-down inverter method is proposed according to the respective advantages of energy storage p

Considering the difference of initial state of each cell, a capacity allocation method of energy storage system (ESS) for ADN considering health risk assessment is proposed in ...
