Based on this standard, we strive to keep voltages delivered to your point of service within 5% of the nominal voltage (120V, 208V, 240V, 277V and 480V) under normal operating conditions.

In today's post, we will show the different types of voltage levels used for industrial and residential applications in the US, Canada, and some other countries following the NEC, CNC or similar ...
