Taiwan's Innovative Green Economy Roadmap (TIGER) is a two-year program with the MIT Energy Initiative, exploring ways that industry and government can promote and adopt ...

This new standard establishes technical parameters for enabling bidirectional power flow between electric vehicles (EVs) and the electrical grid, allowing EV owners to ...

In MIT course 15.366 (Climate and Energy Ventures) student teams select a technology and determine the best path for its commercialization in the energy sector.

MIT researchers developed a new fabrication method that could enable them to stack multiple active components, like transistors and memory units, on top of an existing ...

This new standard establishes technical parameters for enabling bidirectional power flow between electric vehicles (EVs) and the ...

The new Schmidt Laboratory for Materials in Nuclear Technologies (LMNT) at the MIT Plasma Science and Fusion Center accelerates fusion materials testing using cyclotron ...

At the MIT Energy Initiative's Annual Research Conference, speakers highlighted the need for collective action in a durable energy transition capable of withstanding obstacles.

This study investigates the influence of advanced energy export capabilities - Vehicle-to-Grid (V2G) and Vehicle-to-Home (V2H) - and emerging policies on consumers' EV preferences in ...
