What is air cooled seasonal energy storage (ACSES)?

The air-cooled seasonal energy storage (ACSES) system utilizes the natural cold energy of outdoor air during winter to cool the glycol-water solution inside the finned tube cooler. This glycol-water solution is then used to cool the water in the ice-water mixture storage tank through ice storage coils.

Is ice thermal energy storage a sustainable option for cooling buildings?

With rising temperatures and the growing demand for electricity in the U.S., ice thermal energy storage offers a sustainable option for cooling buildings. Trane Technologies, a company that makes heating and cooling equipment, says it has seen a growing demand for this technology over the past few years.

Does air cooled seasonal energy storage reduce energy consumption?

Compared to the ice storage system, the air-cooled seasonal energy storage system can reduce electricity consumption by 15131 kWh, resulting in a 72.75 % reduction in operating costs and significantly decreasing energy consumption. Tailu Li: Supervision, Methodology, Conceptualization.
