Governments worldwide are implementing supportive policies and incentives to promote energy storage deployment, fostering market growth. The key ...

Global energy storage additions are on track to set another record in 2025 with the two largest markets - China and US - overcoming adverse policy shifts and tariff turmoil.

Storage is no longer a phenomenon limited to the U.S., Europe, or China. In 2025, emerging markets in Asia, the Middle East, Latin America, and Eastern Europe have ...

Developing energy storage has become a global consensus. It was announced at COP29 in late 2024 that global storage capacity will increase to 1,500 GW by 2030, more than ...

In 2024, global energy storage battery shipments exceeded 295GWh, a 73.4% increase. CATL, BYD, and EVE Energy hold the top three positions, with the top ten ...

This comprehensive review critically examines the current state of electrochemical energy storage technologies, encompassing batteries, supercapacitors, and emerging ...

In recent years, increased demands for higher energy density, improved rate performance, longer cycle life, enhanced safety, and cost-effectiveness have driven ...

The Electrochemical Energy Storage System market is advancing as one of the most critical enablers of renewable energy and electrification. Around 62% of adoption is led ...
