How much natural gas does Saint John LNG have?

The Saint John LNG terminal currently has a maximum send-out capacity of 1.2 billion cubic feet(Bcf) of natural gas per day,which is enough to heat 5 million homes and up to 20% of the northeast U.S. market. Sign-up now for monthly insights on Atlantic Canada's energy sector.

How many MW is the Coronado Generating Station?

The Coronado generating station has an installed capacity of 773MW. Image courtesy of SmugMug. Salt River Project (SRP) is the owner and operator of the Coronado power plant. Image courtesy of SmugMug. The Coronado generating station is located near St. Johns,Arizona,US. Image courtesy of SmugMug.

How does Saint John LNG work?

The LNG arrives by ship to the terminal in specially designed LNG tankers and is offloaded by being pumped through pipes into LNG storage tanks at the Saint John LNG terminal. The product is then restored from the liquid form to its original gaseous state in a highly controlled process called regasification.

Will NB Power be able to run a 100-year power station?

NB Power is proposing a project to ensure the station can operate to its intended 100-year lifespanwith a modified approach to maintenance and adjusting and replacing equipment over time. This recommendation follows three years of expert research,including input from science,engineers,the public and First Nations.
