This page provides an overview of 5G measurements performed on User Equipment (UE) and Base Stations (BS) or Nodes B (NB). It details both 5G UE measurements and 5G BS ...

CellMapper is a useful app for locating 2G/3G/4G/5G base stations. The application measures the signal strength and other network data collected by end users and uses the data collected to ...

References: Explore 5G measurements for User Equipment (UE) and Base Stations (BS), covering transmitter and receiver test scenarios, conformance, and network stability.

Many 5G base stations do not provide an RF test port to facilitate traditional base station measurements. Learn the challenges of testing 5G NR base stations and how to test the ...

This app can check whether 5G is Sub-6, mmWave, LTE frequency 5G, or anchor band. In addition, if you are connected to 5G, you can also check whether you are using ...

This paper discusses 5G NR Release 16 base station transmitter conformance testing requirements and the specific challenges that arise in millimeter wave (mmWave) frequency ...

Traditionally base stations have been verified by measuring their performance conductively at the antenna interface. With 5G, we enter a new and exciting era for base ...

The figure below shows the process for making an OTA 5G Base Station measurement using successive iterations. Following decoding of the first PCI detected (steps 1 through 6 ...
