Why is my base unit not receiving power?

Troubleshooting - Base unit does not have power, there are no lights lit. If your base unit is not receiving power then you can try to have the base unit plugged on a different power outlet to test. If you have multiple handsets, you can try to use the AC adapter from one of the smaller chargers and have it plugged on the base.

What to do if the power supply is not working?

If the power supply of your ODEN AT is not working, check the fuse F1 (located on the left side of the control unit). Also, make sure that the mains cable is plugged in properly and that mains voltage is present. If the generation stops immediately or after half a cycle, possible causes include the stop condition being set to INT and F2 being off.

Why is my base station not broadcasting?

The software sets up all radio and receiver operating parameters, and is the most likely route to a successful problem resolution once you have checked all connections, cables, and batteries. The base station is not broadcasting. See Base station is not broadcasting below. Incorrect over-the-air baud rates between base station and rover.

How do I fix a bad baud rate between base station and Rover?

Incorrect over-the-air baud rates between base station and rover. Connect to the roving receiver's radio and make sure that it has the same setting as the base station receiver. Mismatched channel or network number selection. Match the base station and rover radio channels/network number and try again.

This section describes some possible station setup and static measurement issues, possible causes, and how to solve them. Use your field software to restart or configure base and rover ...
