Technological advancements are dramatically improving solar storage container performance while reducing costs. Next-generation thermal management systems maintain optimal ...

By this time next year, a 3,444-panel solar array will be floating on the southern half of the reservoir with the goal of producing ...

In 2023, the City of Lima partnered with D3 Energy, LLC for the design and construction of floating solar panels that will be located on the surface of Twin Lakes ...

By this time next year, a 3,444-panel solar array will be floating on the southern half of the reservoir with the goal of producing enough energy to power the nearby water ...

"The purpose of this project is to power the water treatment plant with solar panels, which will save the taxpayers upwards of a million dollars per year what we currently ...

By utilizing floating solar technology, Lima not only maximizes the use of available space but also enhances the efficiency of solar panels through the cooling effect of water.

Developed in partnership with clean energy firm D3Energy, the solar array is mounted on floating platforms atop the reservoir rather than consuming valuable land ...

Work toward building the city's \$5 million floating solar array is officially underway, marking a major step in the city's push toward ...
