---

This project focuses on improving the performance, lifespan, and safety of sodium-ion batteries, making them suitable for large-scale energy storage applications.

This study examines the status and trends of the electric and hybrid vehicle market in Palestine until 2035 and then proposes feasible solutions for managing used batteries.

Now imagine hospitals losing electricity during surgeries or schools shutting down mid-class. That's daily reality in Palestine, where energy poverty affects 93% of Gaza's population ...

Palestine Advances Solar Energy Goals with Landmark The landmark project, based in Tubas Governorate, features a solar power plant with a production capacity of 5.36 MW and storage ...

The road ahead isn't easy. But with 57.4GWh of estimated regional storage demand [1] and advancing technology, Palestine's energy storage plants could transform from crisis managers ...

The project, located in the Tubas Governorate, features a solar power plant with a capacity of 5.36 MW and storage capabilities that ...

With daily power shortages affecting 30% of households in Gaza and the West Bank, this initiative aims to provide cost-effective, safe, and environmentally friendly energy storage solutions.

This technology strategy assessment on sodium batteries, released as part of the Long-Duration Storage Shot, contains the findings from the Storage Innovations (SI) 2030 strategic initiative.
