Are iron flow batteries better than Li-ion batteries?

Iron flow batteries have a longer asset life than Li-ion batteries. Battery manufacturers are collaborating with utility companies to implement iron flow battery projects, aiming to replace diesel-fueled power generation with the more environmentally friendly flow battery system.

How will the flow battery market grow?

The flow battery market is expected to grow significantly as the share of renewables increases in the primary energy mix. Despite their higher CapEx cost compared to lithium-ion batteries, flow batteries are expected to be used extensively for both front-of-the-meter and behind-the-meter applications in the next several years.

What are flow batteries used for?

Flow batteries help create a more stable grid and reduce grid congestion and fill renewable energy production shortfalls for asset owners. Global R&D is fueling the development of flow battery chemistry by significantly enabling higher energy density electrodes and also extending flow battery applications.

What are the benefits of using flow batteries in LDES?

Flow batteries are increasingly being used in LDES deployments due to their relatively lower levelized cost of storage (LCOS), safety and reliability, among other benefits. Also known as redox (reduction-oxidation) batteries, they are made of various components and are produced by several companies.
