What are California's new battery energy storage projects?

The Gateway and Moss Landing projects are just two of the battery energy storage installations being developed across California, a state that has ramped up its use of renewable energy in recent years while phasing out electricity from coal, nuclear, and natural gas-fired power plants.

Is battery storage the cheapest energy source in California?

Clean energy is now the cheapest source of electricity generation globally and the cost of battery storage has fallen by 93% since 2010. Battery storage has already changed how California weathers extreme heat and demand surges. When unprecedented heatwaves hit the state in 2020 and 2022, it underscored the need for more flexible energy resources.

Which energy storage facility will provide resource adequacy support to Pacific Gas & Electric?

The energy storage facility in San Jose will provide resource adequacy support to Pacific Gas & Electric. An energy storage project at Monolith Substation, Tehachapi, CA. Image: Sandia National Laboratories esVolta announced it has secured a \$110 million tax equity transaction with GreenPrint Capital Management.

What is energy storage & why is it important?

Energy storage is powering California's clean and reliable energy future. By capturing excess solar and wind power when it's plentiful and releasing it when demand peaks, batteries keep the grid stable and make it possible to rely on renewable energy around the clock.

esVolta announced it has secured a \$110 million tax equity transaction with GreenPrint Capital Management. The tax equity is ...

Battery developer esVolta has announced it has secured a \$110 million tax equity investment from GreenPrint Capital Management. The tax equity is intended to support ...

California utility Pacific Gas and Electric (PG&E) has launched a VPP programme that looks to provide up to 1,500 customers with battery energy storage systems (BESS).

The Kern County Solar and Battery Storage Project was built by Terra-Gen to provide grid reliability, reduce the carbon footprint of electricity delivery and provide zero-carbon solar ...

We are happy to announce that our first investment in new renewable energy, an innovative solar plus battery storage project in Kern County, is now producing power. This project was built by ...

The innovative Kern Solar and Battery Storage Project built by Terra-Gen is providing power for SJCE customers in a unique format: fixed delivery of 62 megawatts (MW) ...

The Californian city of San José aims to produce enough clean electricity to power nearly 65,000 homes annually for the next 12 years through its latest solar and battery storage project.

San José State recently joined the Aqueous Battery Consortium, an energy hub research project supported by the Department of Energy (DOE) and led by Stanford University ...
