MATLAB models a solar photovoltaic (PV) system with a battery energy storage system (BESS). The data indicate that the proposed inverter can provide constant energy to ...

Based on the simulation results obtained, the proposed control strategy is cap-able of achieving robust current regulation, unity power factor, low THD and maximizing energy extraction from ...

To enhance the controllabil-ity and flexibility of the IBRs, this paper proposed an adaptive PQ control method with a guaranteed response trajectory, combining model-based analysis, ...

Strategy II has a larger P-Q capability with low PCC voltages and can maintain stability during fault ride-through. Strategy I can maintain stability only when the voltage is not less than a ...

This paper presents an improved inverter control strategy that is modelled in a PQ reference frame.

Three phase off-grid inverter is driven using Sine PWM. The sine references are generated using a Harmonic oscillator. The closed loop control is implemented in synchronous ...

This paper aims at developing the control circuit for a single phase inverter which produces a pure sine wave with an output voltage that has the same magnitude and frequency as a grid voltage.

This paper delves into the system stability of PQ inverters with different power control methods under weak grid.
