---

The Solar System is made up of one central star, eight (or nine, or ten...) known planets, satellites orbiting the planets, and miscellaneous debris; minor bodies; asteroids, meteoroids, comets, ...

Revolving around the sun are eight planets. The planets are divided into two categories based on their composition, terrestrial and Jovian. Terrestrial planets, including ...

Inside the Sun's core hydrogen is fused into helium for billions of years, releasing energy which is over even longer periods of time emitted through the Sun's outer layer, the photosphere. This ...

Solar system, assemblage consisting of the Sun and those bodies orbiting it: 8 planets with more than 400 known planetary satellites; many asteroids, some with their own ...

Explore the Solar System's structure--Sun, inner and outer planets, asteroid belt, Kuiper Belt, and Oort Cloud with key features and facts.

Revolving around the sun are eight planets. The planets are divided into two categories based on their composition, terrestrial and ...

Dive into a complete tour of our Solar System, from the blazing surface of the Sun all the way out to the edge of interstellar space.

It consists of the sun, eight planets and their moons, an asteroid belt, and other celestial bodies such as comets. The four planets closest to the sun--Mercury, Venus, Earth, and Mars--are ...
