---

The main aim of the research is to determine the conditions under which it would be possible to increasingly cover as much electricity demand of Latvia as possible by the ...

Creating new solar farms will reduce emissions from fossil fuel-based electricity generation and is a vital step towards a green transition and energy independence. The Nordic ...

In 2024, solar power in Latvia grew over 3.1 times to 6.7% of total electricity, becoming the third-largest source, while wind reached a record 38 GWh and hydropower, ...

"Electricity production from renewable sources in Latvia has seen significant growth in recent years, but the momentum gained so far is not enough, and there is still too little solar ...

These advanced panels capture sunlight from both sides, maximizing energy generation. Projected to produce 99 GWh of electricity annually, the farm will make a ...

As a trusted solar panel company in Latvia, we manufacture and supply premium-grade solar panels that harness the power of the sun to generate clean and sustainable energy.

However, local governments, like in the capital Riga, are actively engaging in sustainable energy plans, promoting solar PV expansion. Various funding programs support rooftop solar PV ...

Despite these seasonal variations in solar power generation potential, Riga's overall suitability for solar PV systems remains viable when considering annual energy ...
