Within this model, we leverage the flexibility of mobile small-cell base stations (MSBS) to seamlessly traverse service regions. We compute the transmission power and ...

In today's 5G era, the energy efficiency (EE) of cellular base stations is crucial for sustainable communication. Recognizing this, Mobile Network Operators are actively prioritizing EE for ...

This study introduces a hybrid-boosted ensemble model tailored for predicting energy utilization in 5G base stations. The methodology merges ridge regression for linear trend analysis, ...

To enhance the utilization of base station energy storage (BSES), this paper proposes a co-regulation method for distribution network (DN) voltage control, enabling BSES ...

Aiming at the problem of mobile data traffic surge in 5G networks, this paper proposes an effective solution combining massive multiple-input multiple-output techniques ...

Discover how base station energy storage empowers reliable telecom connectivity, reduces OPEX, and supports hybrid energy.

To enhance the utilization of base station energy storage (BSES), this paper proposes a co-regulation method for distribution ...

By 2025, expect hybrid power stations to integrate ammonia cracking for hydrogen production. NTT Docomo's prototype in Osaka achieves 99.999% availability using this ...
