Does the UAE need to diversify its energy source?

The UAE government has made a significant leap in recent years in supporting the diversification of energy generation. However, it will likely take some time before the identified goals and targets are achieved. There are certain barriers which depend on the energy source.

Does Dubai have a solar power system?

In order to encourage residential and commercial buildings to make use of solar panels, Dubai passed Executive Council Resolution 46/2014 concerning the Connection of Generators of Electricity from Solar Energy to the Power Distribution System in the Emirate of Dubai, known as the Shams Dubai, a distributed renewable energy regime.

Should the United Arab Emirates rethink the cost of solar panels?

The costs and the process of installing solar panels should not be prohibitive. The United Arab Emirates could also revise its costs for waste disposal to support greater waste-to-energy conversion and encourage the installation of solar panels in residential projects by offering cost incentives.

Can the United Arab Emirates export renewable hydrogen?

It is envisaged that the United Arab Emirates, with its abundant solar power, has the potential to export renewable hydrogen in the future. As the power and energy sector is state owned, the UAE government decides on the export of any renewable energy. Currently, UAE exports oil and gas only to various countries.
