How to charge a super-capacitor?

When it comes to charging a super-capacitor there are two golden rules, the capacitor should be charged with correct polarity and with a voltage not exceeding 90% of its total voltage capacity. Super-capacitors in market today are normally rated for 2.5V, 2.7V or 5.5V.

How much does a super capacitor cost in Australia?

Should a super capacitor be charged and discharged safely?

But because of this capability of handling high current,a super capacitor should be charged and discharged safely to prevent thermal runaway. When it comes to charging a super-capacitor there are two golden rules,the capacitor should be charged with correct polarity and with a voltage not exceeding 90% of its total voltage capacity.

Can You charge a super capacitor at a higher voltage?

1) You must never charge past the capacitor voltage rating. If you have a 2.5v super capacitor, you must NEVER charge it at a higher voltage. If you do, you risk damaging the integrity of the capacitor, or worse, an explosion. Personally, I never charge past 80-90% of the rated charge.
