In 2025, we expect 7.7 GW of wind capacity to be added to the U.S. grid. Last year, only 5.1 GW was added, the smallest wind capacity addition since 2014. Texas, Wyoming, and ...

The Integrated Wind Solar and Energy Storage Market was valued at USD 12.5 billion in 2024 and is projected to reach USD 35.0 billion by 2034, registering a CAGR of 11.0%.

Global renewable capacity is set to continue with robust growth in 2025, with forecasts pointing to more than 500 GW of new solar ...

The U.S. is on track to add 60 GW of clean energy capacity in 2025, according to developer projections. If those numbers hold, that would represent 26% growth, compared to 2023's ...

What role will solar, wind and storage technologies play in addressing the pending "energy emergency" in the United States, and how is the industry responding to heightened ...

The data from ACP demonstrates an industry entering a new chapter with incredible momentum. The clean energy industry shattered records in 2024, deploying an unprecedented ...

Unlike thermal generation, wind and solar are inherently variable, spatially distributed, and weather dependent. Their output fluctuates daily and seasonally, often ...

Solar accounted for 58% of all new electricity-generating capacity added to the US grid through the third quarter of 2025, with more than 30 GW installed. Solar and storage, ...
