What is NYCIDA's largest battery energy storage project?

NYCIDA closed its largest battery energy storage project to date, the East River Energy Storage Project, located on an industrial site on the East River in Astoria, Queens. When built, the facility will be able to hold up to 100 megawatts (MW) and power over tens of thousands of households.

Should multi-day storage projects be included in future grid planning?

Comments submitted to the PSC by LDES technology developers Form Energy, Hydrostor and Plug Power cheered the recommendations, with Form Energy recommending multi-day storage projects be included in all future grid planning processes and Hydrostor advocating for projects greater than 100 MW.

How will energy storage impact New York?

Storage will increase the resilience and efficiency of New York's grid, which will be 100% carbon-free electricity by 2040. Additionally, energy storage can stabilize supply during peak electric usage and help keep critical systems online during an outage. All of this while creating an industry that could employ at least 30,000 New Yorkers by 2030.

What is New York state's energy storage plan?

New York State aims to reach 1,500 MW of energy storage by 2025 and 6,000 MW by 2030. Energy storage is essential for creating a cleaner, more efficient, and resilient electric grid. Additionally, these projects will provide meaningful benefits to Disadvantaged Communities and Low-to-Moderate Income New Yorkers.

Energy storage is essential to a resilient grid and clean energy system. Learn about the types of energy storage, available incentives, and more.

Residential, commercial, industrial, and utility users are beginning to install energy storage systems to fulfill their energy and reliability needs, but challenges remain to deploying these ...

These development-stage projects bring business model and technology innovations to the New York energy storage market, helping to accelerate the State towards its ...

The project will include two separate battery energy storage systems capable of charging from and discharging into the New York power grid and a solar canopy system ...

The project will help displace fossil fuel-fired generation when the demand for power is highest. The 100 MW East River Energy Storage System will hold enough electricity to power more ...

The Ningxia Industrial Park in China stores enough energy to power 1 million homes. That's like combining the Eiffel Tower's height with the efficiency of a Swiss watch - if ...

Now two years into this controversial endeavor, more than a dozen energy storage sites are currently in the pipeline for Staten Island, several of them set to receive more than ...

Residential, commercial, industrial, and utility users are beginning to install energy storage systems to fulfill their energy and reliability needs, but ...
