What is an uninterruptible power supply (UPS)?

An uninterruptible power supply (UPS) offers guaranteed power protection for connected electronics. When power is interrupted, or fluctuates outside safe levels, a UPS will instantly provide clean battery backup power and surge protection for plugged-in, sensitive equipment.

What are the different types of uninterrupted power supplies?

There are 3 different types of uninterrupted power supplies: This is the most basic type of UPS system available. These UPS systems immediately switch on when they detect an interruption in municipally supplied power (for example during load shedding).

Why should a Home Office have an uninterruptible power supply?

Having an uninterruptible power supply will protect your home office from power surges and more. Some of the most common household appliances should not be plugged into a UPS system. This is because their average draw is very high and can put strain on the UPS potentially damaging it.

How long does a dynamic uninterruptible power supply last?

The on-battery run-time of most uninterruptible power sources is relatively short (only a few minutes) but sufficient to start a standby power source or properly shut down the protected equipment. Dynamic uninterruptible power supply (UPS) systems demand calibrations customised to your customer's power output and transient response requirement.

To prevent these challenges, UPS (Uninterruptible Power Supply) systems and battery bank solutions offer a reliable backup during ...
